

Nguyen Dinh Chien – Full Stack Software Engineer
Phone: +84 981646705 / Email: nguyendinhchienvnex@gmail.com
Portfolio: <https://nguyendinhchienvnex.github.io/Developer-Profile>
LinkedIn: <https://www.linkedin.com/in/chien-nguyen-dinh-2801633a1>

SUMMARY

I'm a Full Stack Software Engineer with 1 year of experience in building software & web applications. Proficient in developing robust backend services (Python, Django, FastAPI) and dynamic front-end interfaces. Backed by a solid foundation in database design, OOP, and practical DevOps practices (Docker, AWS).

TECHNICAL SKILLS

- Programming Languages: C++, C#, JavaScript, Python (Advanced)
- Frontend & Web: HTML5, CSS3, Bootstrap, DOM Manipulation
- Backend & Frameworks: Django, FastAPI, RESTful APIs, Web API
- Database Management Systems: PostgreSQL, MS SQL Server, MySQL
- DevOps & Tools: Docker, AWS Cloud, Git
- Foreign Languages: TOEIC 650+

Others:

- Good understanding of OOP methodologies, SOLID principles
- Possesses good reading comprehension skills for work-related documents.

EDUCATION:

Academy of Cryptography Techniques (GPA 3.3)

2022-2026

PROFESSIONAL EXPERIENCE

HI-TECH SOLUTION (HCM) – Backend Engineer

09/2025 – 03/2026

Project: Smart IoT Platform (5 members)

- **Description:** A scalable, high-performance IoT backend platform designed to connect, monitor, and manage thousands of smart devices in real-time, enabling automated workflows and secure data telemetry processing.
- **Technologies:** Python, FastAPI, PostgreSQL, Redis, MQTT/WebSockets, Docker, Git.
- **Responsibilities:**
 - Designed and optimized a relational database schema in PostgreSQL to efficiently store device metadata, system logs, and time-series telemetry data.
 - Developed high-throughput, asynchronous RESTful APIs using FastAPI to handle device registration, authentication, and user management with low latency.
 - Implemented secure device communication and real-time data ingestion pipelines utilizing MQTT brokers and WebSockets for duplex communication.
 - Utilized Redis for caching frequently accessed device states and managing background task queues to optimize system resource utilization.
 - Containerized the backend application components using Docker to ensure environment consistency and streamline local development and staging workflows.
 - Applied clean code architectures and wrote comprehensive unit tests to ensure platform stability, reliability, and ease of future feature expansion.

AI Power (HCM) – Backend Engineer

03/2026 – 08/2026

Project: Custom Web Solutions (4 members)

- **Description:** A tailored web development project focused on delivering customized, high-quality, and feature-rich web applications driven by specific client requirements and business objectives.
- **Technologies:** Python, Django, MySQL/PostgreSQL, RESTful APIs, Git.
- **Responsibilities:**
 - Analyzed diverse client requirements to design flexible, normalized, and scalable database architectures tailored to specific business logic.
 - Developed secure, modular, and reusable RESTful APIs using Django to facilitate smooth integration with front-end components and client systems.

- Implemented customized core features including role-based access control (RBAC), secure payment gateway integrations, and automated notification services.
- Optimized backend query performance and endpoint response times to ensure high application speed and seamless user experience.
- Collaborated closely with front-end developers and project managers to troubleshoot bugs, refine business requirements, and ensure on-time delivery.
- Maintained clean code repositories and structured API documentation to ensure smooth handovers and ease of maintenance for clients.

PASTIMES AND ACTIVITIES:

- Actively read books and technical documents related to software installation and deployment.
- Participate in testing and evaluating installers on specialized websites.
- Continuously learn about new technologies through technical YouTube channels.
- In my free time, I also work on some pet projects. They can be found at my GitHub profile: <https://github.com/nguyendinhchienvnex>
